

Introduction of the Company Libela orodja, d.o.o., Celje - Forming Sheet Metal to your Specifications

Perforated sheet metal components are to be found in countless industrial applications. Metal-forming tool developer Libela orodja, d.o.o., Celje ensures the ongoing supply of high-quality perforated sheet metals in all shapes and sizes.

Libela orodja, d.o.o., Celje was established following internal restructuring within the Libela Celje corporation. As part of the Toolshop and Perforated Metals Department, the company was spun off from the group and has been operating independently since 1992. It benefits greatly from its affiliation with the parent company, drawing on 70 years of experience in the metal-forming industry. With 30 members of staff on its payroll, Libela orodja generates annual turnovers amounting to one million Euros.

Company specialise in the development of sheet metal perforation tools, moulds for pressure casting, injection-moulding moulds, as well as metal-forming, metal-stamping and metal-punching tools. The portfolio includes a wealth of top of-the-range transfer and progressive sheet metal-forming tools, curving, bending, cutting and traction tools, a wide selection of moulds, for example moulds for gravity casting of metals, moulds for plastic, rubber and minerals, precision components for metal-forming tools, as well as a wide range of boring, measuring and assembly equipment.

High-performance tools and moulds are utilised in a wealth of production processes, and, in some cases, have to be customised to satisfy specifications required by the customer. Working hand in hand with the clients, the engineers at Libela orodja develop new products from scratch, starting with 3D drawings and models and subjecting the prototypes to meticulous tests, before the products are supplied to the clients. The production capacity is laid out for small series as well as for mass production, depending on the requirements. The tools are then used in the manufacture of a diverse range of products, including, for example, filters, protection fences, strainers, and sieves, as well as automotive components, to name but a few.

Customers from various industrial segments make use of the quality products manufactured by Libela orodja, d.o.o., Celje. Their client group is made up of automotive suppliers, such as manufacturers of seat, electronic goods and home appliances. A prominent customer is the international corporation Gorenje d.d., a supplier of modern home appliances, computerised household devices, heating and cooling appliances, and state-of-the-art freezers.”

Situated in Slovenia, Libela orodja, d.o.o., Celje exports its goods to partners in Southern and Western Europe, where it has attained considerable renown. It is our aim to strengthen our presence in the international markets. Constantly striving to optimise its performance, the future-oriented company is currently investing heavily into the modernisation of its production machinery, tools and moulds, a move that will help it to remain competitive in an ever-changing industry.
